

Request for Studio B Access

Regaining trust to build an
LLM for Technology &
Innovation Seminar

01
...

Academic goal

Make this project into my magnum opus of Tech Seminar

02
...

Personal goal

Learn hands-on how modern generative AI works

03
...

Community goal

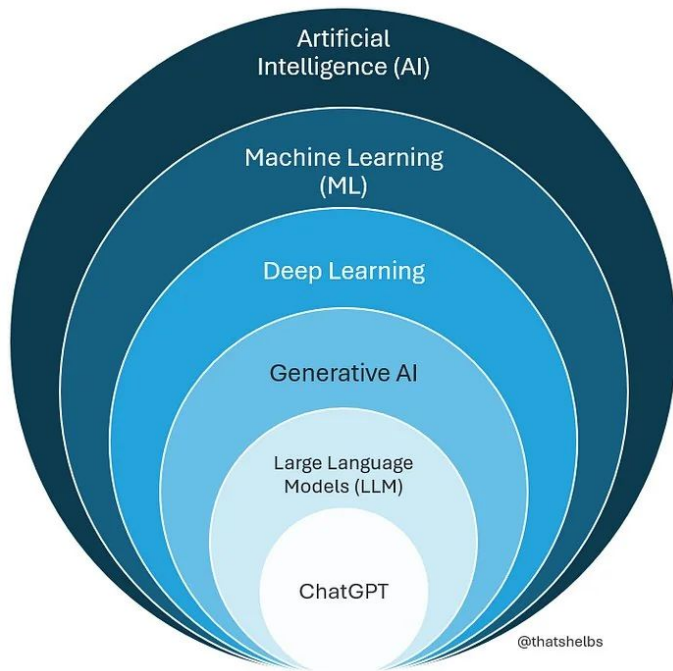

Contribute the model to Webb's AI project or WebbGPT

04
...

Technical goal

Create ~6B GPT-style model that is beyond the laptop scale

What I want to accomplish

I want to take on an ambitious LLM project in Tech Seminar that pushes my learning and serves the Webb AI effort, and it requires Studio B's computing power to achieve it.

What the project is

Two-track approach

- Full model: ~6B parameters, 1:25 of GPT-3, assistant role
- MVP path: smaller version for testing and iteration

What it should do

- Express and contribute ideas clearly in conversations
- Answer Webb course-catalog and handbook questions

What I produce

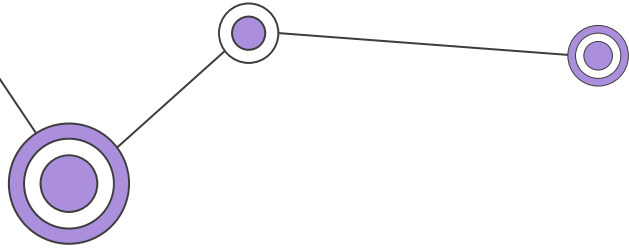

- Prototype model that has been trained and evaluated
- Results, limitations, and comparisons

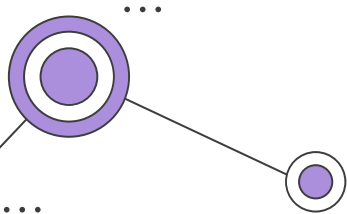

What I need

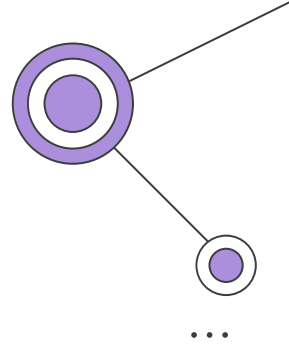

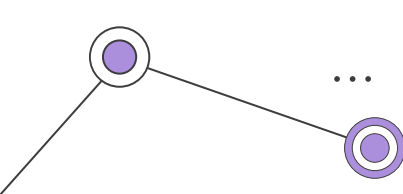

For this project, I need access to a Studio B computer because the LLM work I want to do requires much more computing power than my laptop. I would need an account on a computer so my work is secure and the machine remains usable for others. I would also need Visual Studio Code for Python development and Amphetamine to keep the computer awake during long runs. Similar to the setup we used for the science fair, this arrangement is the minimum environment needed for the project to run properly. I also need permission to inspect the computer during its runs to monitor progress.

I was trusted with access. I made the wrong decision by sharing it, so I learned trust does not replace authorization, and responsibility requires boundaries.

What I learned

How I will prevent this from happening again

01

Never share
passwords or
credentials

02

Any access questions
go directly to the tech
office

03

Being okay with
check-ins, restrictions,
or monitoring if needed

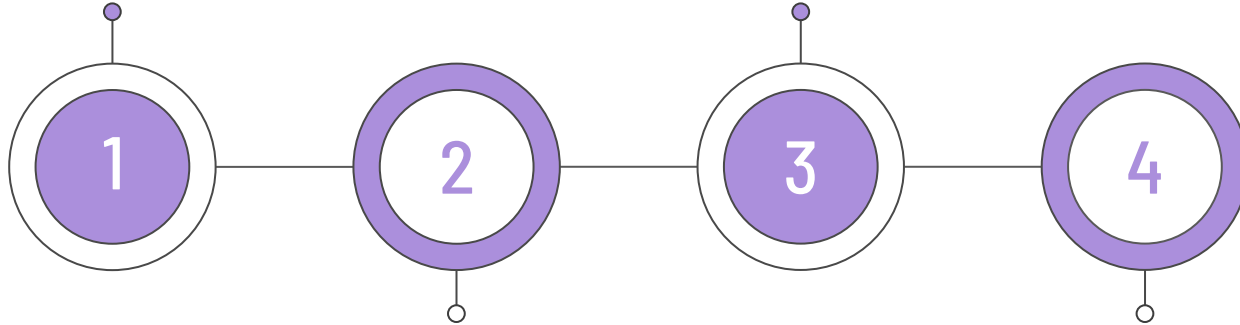

04

Keeping a project
log if asked upon

Why approving this is worth it

Allowing me to prove a responsible recovery after a mistake

Uses school resources to a high level that produces an academic outcome

Supporting in-depth, hands-on learning of a student who is genuinely interested in this topic

Opening up possibilities in the community with WebbGPT, AI project, and AI Challenge

A decorative network diagram with purple nodes and lines. The nodes are represented by concentric circles, with some having a solid purple center and others being hollow. They are connected by thin black lines. The diagram is spread across the top, bottom, and right edges of the slide, framing the central text area. There are three dots (...) at the top right and bottom left, indicating the network continues.

My ask:

**To regain access to Studio B, rebuild
the trust that was lost, and move
forward with clearer responsibility**

A decorative graphic consisting of several purple circles of varying sizes, some with concentric circles inside, connected by thin black lines. These elements are arranged in a network-like pattern around the central text, with some lines extending towards the corners and ending in ellipses.

**Thank you for your
consideration and time**
